QUALITY ASSURANCE AND SURVEILLANCE PLAN (QASP)

This plan provides an effective method to promote satisfactory contractor performance. The QASP provides a method for the Contracting Officer's Representative (COR) to monitor Contractor performance, advise the Contractor of unsatisfactory performance, and notify the Contracting Officer of continued unsatisfactory performance. The Contractor, not the Government, is responsible for management and quality control to meet the terms of the contract. The role of the Government is to monitor quality to ensure that contract standards are achieved.

Performance Objective	Scope of Work Paragraphs	Performance Threshold
<u>Services.</u> Performs all services set forth in the scope of work.	___"1" thru "3" _____	All required services are performed and no more than one (1) customer complaint is received per month.

1. SURVEILLANCE. The COR will receive and document all complaints from Government personnel regarding the services provided. If appropriate, the COR will send the complaints to the Contractor for corrective action.

2. STANDARD. The performance standard is that the Government receives no more than one (1) customer complaint per month. The COR shall notify the Contracting Officer of the complaints so that the Contracting Officer may take appropriate action to enforce the inspection clause (FAR 52.212.4, Contract Terms and Conditions-Commercial Items (May 2001), if any of the services exceed the standard.

3. PROCEDURES.

(a) If any Government personnel observe unacceptable services, either incomplete work or required services not being performed they should immediately contact the COR.

(b) The COR will complete appropriate documentation to record the complaint.

(c) If the COR determines the complaint is invalid, the COR will advise the complainant. The COR will retain the annotated copy of the written complaint for his/her files.

(d) If the COR determines the complaint is valid, the COR will inform the Contractor and give the Contractor additional time to correct the defect, if additional time is available. The COR shall determine how much time is reasonable.

(e) The COR shall, as a minimum, orally notify the Contractor of any valid complaints.

(f) If the Contractor disagrees with the complaint after investigation of the site and challenges the validity of the complaint, the Contractor will notify the COR. The COR will review the matter to determine the validity of the complaint.

(g) The COR will consider complaints as resolved unless notified otherwise by the complainant.

(h) Repeat customer complaints are not permitted for any services. If a repeat customer complaint is received for the same deficiency during the service period, the COR will contact the Contracting Officer for appropriate action under the Inspection clause.

4. PROCEDURES FOR INSPECTING/CLEANING/DISINFECTING DRINKING WATER STORAGE TANKS

- a) If the property is occupied, supply and connect a sterile temporary water storage tank with enough capacity to provide uninterrupted water supply to the occupant (minimum 250 gallons).
- b) Drain the tank and inspect the hatch and entry ladder (if present) for integrity and safe entry.
- c) Clean the tank interior – implement all confined space entry requirements in Appendix A before allowing anyone to enter the tank. Remove any accumulated sediment/sludge from tank bottom. Scrub walls with a wire brush and fresh water and remove all residue. The use of cleaning materials containing chlorine such as bleach solution or any other hazardous material is not allowed due to the significant risks posed to workers.
- d) Conduct any structural inspection or repair that may be necessary. Repairs are to include filling small holes or cracks with cement-based fillers. If interior recoating is required refer to paragraph J for special requirements due to the extremely hazardous nature of this operation.
- e) Following any maintenance measures necessary the interior walls and floor should be rinsed with fresh water and any remaining residue and water should be removed.
- f) For drinking water storage tanks add 0.13 pounds (59 grams) of dry calcium hypochlorite (granules, pellets, or tablets broken or crushed to sizes not larger than 6 mm or 1/4 inch) per 1,000 gallons (3785 liters) of volume in the tank prior to filling the tank with water to produce 10 mg/l (ppm) chlorine concentration. The material should be located so that inflowing water will ensure a current of water circulating through the calcium hypochlorite to obtain good mixing. It should only be placed on dry surfaces unless adequate precautions are taken to avoid exposure to toxic chlorine gas liberated upon contact with water. There should not be anyone inside the tank during this operation. Fill the tank with fresh water and allow standing for 24 hours.
- g) After 24 hours if local environmental regulations allow, drain the chlorinated water from tank, i.e. storm sewer or sanitary sewer. Contact with grass or other vegetation may cause an adverse effect due to presence of chlorine. If local environmental regulations do not allow discharge of chlorinated water, add 0.11 pounds (50 grams) of sodium Meta bisulfite per 1000 gallons to dechlorinate the water. Let stand for 2 hours.
- h) Drain the tank, fill with fresh water and put back in operation. Calcium hypochlorite should be technical grade (65 percent (minimum) available chlorine) in granular form. Sodium Meta bisulfite (technical grade containing 98 percent (minimum) sodium metabisulfite) is available as fine granular crystals. There are hazards associated with these products. Material safety data

sheets should be obtained, provided to the customer, and reviewed for data and guidance on toxic properties, safe handling, use, storage and disposal.

- i) Small (non-accessible) above ground water storage tanks. Some residences may use small tanks (e.g. 50- 500 gal) (189-1,893 liters) including roof-top tanks for water or drinking water storage which cannot be entered. Small tanks should be inspected, cleaned, and disinfected periodically depending on the amount of sediment and other matter, such as algae, which has collected in the tank. Tanks should be drained and cleaned (scrubbed and hosed or pressure washed) of accumulated sediment and other matter. Drinking water tanks should be filled with fresh water and chlorine added to obtain a concentration of 10mg/l (ppm). Add 2½ tablespoons of Clorox/household bleach (5.25% available chlorine) per 50 gallons (189 liters) of water (13 ounces or 377 ml for 500 gallons). Let stand for 24 hours. After evaluating environmental issues (paragraph 3f) drain in an appropriate manner and refill for regular use.
- j) The use of any chemical materials (by personnel inside the tank) such as those used to coat tank interiors, presents very hazardous, possibly life-threatening conditions. The tank entry procedure described above is not adequate for such operations. If it is necessary to recoat any of the vessels, do not do this until you have contacted SHEM for further guidance.
- k) For roof top tanks that are located within six feet of the roof edge, fall protection measures must be taken. The use of temporary guard rails or body harnesses with properly anchored fall arrest systems are acceptable.

5. WORKING HOURS

Working hours are to be 0800 to 1630 Mon-Fri, unless otherwise advised by the COR. No work is to take place outside these hours without approval of COR.

6. INSPECTION

The Contractor shall maintain a system of quality assurance to ensure that all works meets the requirements of this contract. The Government reserves the right to inspect the Contractor's work.

7. ACCESS

The Consulate reserves the right to deny access to Contractor who do not meet Consulate standards due to security or other standards. Access for the personnel must be coordinated with the COR.

Appendix A

8. CONFINED SPACE ENTRY REQUIREMENTS:

The following Procedures apply to entry of all water storage tanks.

- a) The primary safety and health concerns in entering water tanks/cisterns are lack of oxygen, fluids Entering the vessel and possible electrical/mechanical Hazards, should there be electrical equipment such as a Submersible pump in any of the vessels.
- b) Oxygen deficiency can result from displacement by other gases but more likely in this case by biological or chemical reactions i.e. Rusting, presence of organic matter.
- c) The required strategy for safe tank entry is to take measures to remove the hazards and then have an emergency response plan for Extricating workers in case something unexpected occurs.
- d) After water is drained, depressurize and mechanically blank off the incoming water line(s) and physically lock the water valve(s) closed.
- e) Physically lock out electrical circuits supplying any electrical equipment such as water pumps Contained in the vessel or feeding the vessel.
- f) Open all hatches/ports and mechanically ventilate the vessel with forced air blowers for 20 minutes.
- g) Attach a large diameter hose to the fan, insert the hose through the opening and run it to the end of the tank furthest from the opening and ventilate for 20 minutes before entry.
- h) Ventilation should be provided whenever anyone is in the tank. If work stops for a day or so, ventilate for another 20 minutes before anyone can re-enter.
- i) This procedure can be Modified and shortened if you have a qualified Individual measure the oxygen concentration with a properly calibrated oxygen detector prior to Beginning work each day.
- j) Tank workers have appropriate personal Protective equipment for the job. i.e. Eye protection and possibly Respiratory protection if manual cleaning/scraping of the tank surface produces airborne particulate.
- k) Use of electrical mechanical means i.e. grinders Etc. Is not recommended since they can create more severe hazards including high particulate levels, severe hazardous noise problems and possibly electrical hazards.
- l) Any individual working inside the vessel should be Equipped with a safety harness/lifeline.
- m) One Individual should always be outside the tank monitoring the operation, available to implement emergency extraction of workers should the need Arise.
- n) This emergency procedure should be preplanned, and workers trained in its Implementation.
- o) Depending on the physical situation other equipment may be needed to successfully extract an individual from a vessel.

(h) *Certification Regarding Responsibility Matters (Executive Order 12689)*. (Applies only if the contract value is expected to exceed the simplified acquisition threshold.) The offeror certifies, to the best of its knowledge and belief, that the offeror and/or any of its principals—

(1) Are, are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency;

(2) Have, have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a Federal, state or local government contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, violating Federal criminal tax laws, or receiving stolen property;

(3) Are, are not presently indicted for, or otherwise criminally or civilly charged by a Government entity with, commission of any of these offenses enumerated in paragraph (h)(2) of this clause; and

(4) Have, have not, within a three-year period preceding this offer, been notified of any delinquent Federal taxes in an amount that exceeds \$3,500 for which the liability remains unsatisfied.

(i) Taxes are considered delinquent if both of the following criteria apply:

(A) *The tax liability is finally determined.* The liability is finally determined if it has been assessed. A liability is not finally determined if there is a pending administrative or judicial challenge. In the case of a judicial challenge to the liability, the liability is not finally determined until all judicial appeal rights have been exhausted.

(B) *The taxpayer is delinquent in making payment.* A taxpayer is delinquent if the taxpayer has failed to pay the tax liability when full payment was due and required. A taxpayer is not delinquent in cases where enforced collection action is precluded.

(ii) *Examples.*

(A) The taxpayer has received a statutory notice of deficiency, under I.R.C. §6212, which entitles the taxpayer to seek Tax Court review of a proposed tax deficiency. This is not a delinquent tax because it is not a final tax liability. Should the taxpayer seek Tax Court review, this will not be a final tax liability until the taxpayer has exercised all judicial appeal rights.

(B) The IRS has filed a notice of Federal tax lien with respect to an assessed tax liability, and the taxpayer has been issued a notice under I.R.C. §6320 entitling the taxpayer to request a hearing with the IRS Office of Appeals contesting the lien filing, and to further appeal to the Tax Court if the IRS determines to sustain the lien filing. In the course of the hearing, the taxpayer is entitled to contest the underlying tax liability because the taxpayer has had no prior opportunity to contest the liability. This is not a delinquent tax because it is not a final tax

liability. Should the taxpayer seek tax court review, this will not be a final tax liability until the taxpayer has exercised all judicial appeal rights.

(C) The taxpayer has entered into an installment agreement pursuant to I.R.C. §6159. The taxpayer is making timely payments and is in full compliance with the agreement terms. The taxpayer is not delinquent because the taxpayer is not currently required to make full payment.

(D) The taxpayer has filed for bankruptcy protection. The taxpayer is not delinquent because enforced collection action is stayed under 11 U.S.C. §362 (the Bankruptcy Code).

(i) Certification Regarding Knowledge of Child Labor for *Listed End Products* (*Executive Order 13126*). (iv) The compensation (wage and fringe benefits) plan for all service employees performing work under the contract is the same as that used for these employees and equivalent employees servicing commercial customers.
